AT&T Self-Service Network Management portal

The Self-Service Network Management portal is an online tool used by Managed Services customers to execute logical changes on their network devices.

Currently, the Self-Service Network Management portal is accessible to customers of the following services:

- Managed Router Services
- Managed Local Area Network (LAN)
- AVPN Managed

Overview

Make changes with Self-Service Network Management portal

Overview

With the Self-Service Network Management portal, users can make near real-time changes to their provisioned devices online without the aid of an AT&T representative.

Register for Self-Service Network Management portal

Eligible users are given access to the portal by an AT&T lead engineer, in agreement with the customer, through the WCA portal. Users receive training on how to use the portal from their assigned lead engineer. To request access for yourself or another employee, send us your Business Center login email and the business center company name to dl-self-service-onboarding@intl.att.com and your assigned lead engineer will contact you to agree on the next steps.

Access to Self-Service Network Management portal

To access the Self-Service Network Management portal:

- Log in with your email address and password to Business Center
- On the Business Center dashboard, in the **Other Tools** widget, click **Self-Service Network Management Portal**

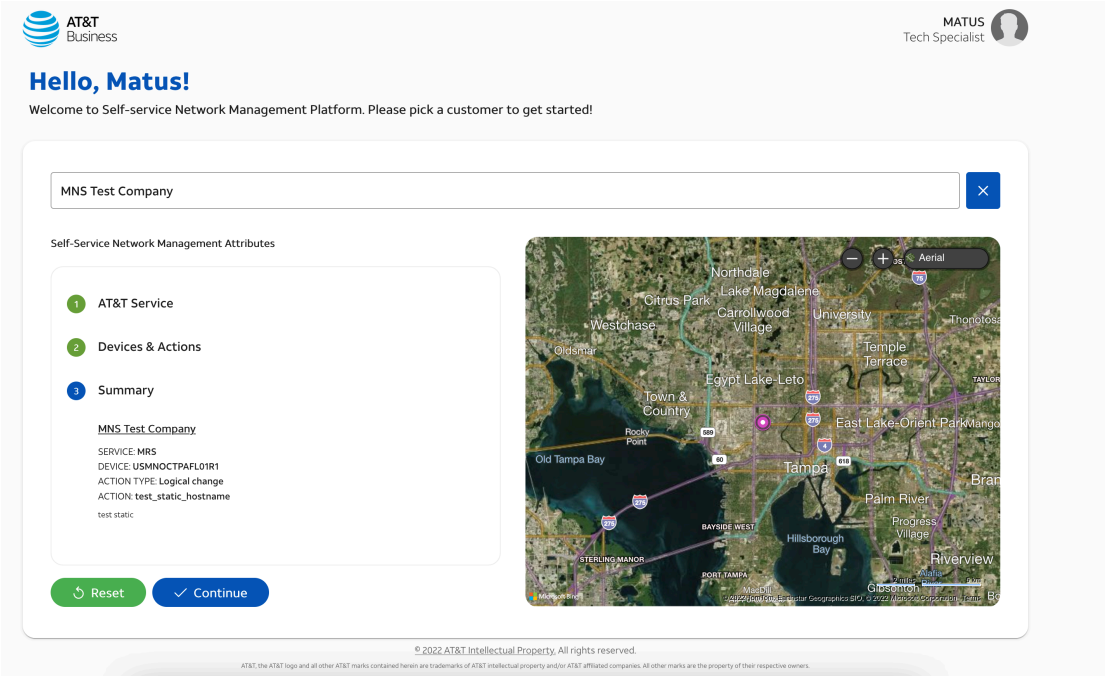
Make changes with Self-Service Network Management portal

Users can make changes to their managed services in real-time using the Self-Service Network Management portal. To start:

- Enter your customer, service, and device information in the provided fields and then select the action, or type of change, you want to make. Actions users can make, but are not limited to, include:
  - LAN port activation
  - Access list changes
  - New network advertisement in Border Gateway Protocol (BGP), prefix-list updates
  - Virtual Local Area Network (VLAN) assignment changes, access port definitions
  - Routing changes (static routes)



Example of self-services page showing customer information fields

- After submitting your information, your device or service's current settings and command options appear. Select your new changes.

NOTE: Options will vary depending the user's enabled permissions and services.
